

SKY-FRAME PLAIN.

SKY-FRAME

SKY-FRAME PLAIN

OPTION

What makes the Sky-Frame Plain so special is the hidden, seamless transition between the inside and the outside that is completely flush with the floor. The sliding window glides over an opening in the floor with a width of just 10 mm / $\frac{3}{8}$ " inches. The space between the narrow tracks is covered with the same flooring material as the interior of the room, which enhances a smooth transition between indoors and outdoors. Once the doors are open, this seamless transition creates a visually and tactilely pleasing effect - especially for those who love to go barefoot, both young and old.
